BY FINN JUHL

SIDEBOARD 1955

After Finn Juhl's rise to stardom in the American design circles around 1950, he became increasingly inspired by his American colleagues. Up until then, wood had predominantly been his preferred material but at this time he gradually started experimenting with steel as well. Finn Juhl's simple and beautiful sideboard from 1955 combines exclusive materials with the colors from Goethe's color wheel.
